

Project Design Phase

Problem – Solution Fit

Date	21 February 2026
Team ID	LTVIP2026TMIDS87945
Project Name	Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau
Maximum Marks	2 Marks

Problem – Solution:

The Problem–Solution Fit ensures that the identified customer problem is clearly understood and that the proposed solution effectively addresses that problem. For our project, we identified challenges faced by users while accessing and analyzing UNESCO World Heritage Sites data, and designed an interactive visualization platform to solve those challenges.

Purpose:

- ☐ **Solve complex data interpretation problems** by transforming large and unstructured UNESCO World Heritage datasets into interactive and user-friendly visual dashboards that suit the needs of students, researchers, and explorers.
- ☐ **Increase solution adoption** by leveraging widely used platforms such as Tableau and web-based interfaces, enabling users to explore heritage data through familiar and accessible digital tools.
- ☐ **Improve communication and insight delivery** by presenting heritage information using visual storytelling techniques, interactive filters, maps, and comparative charts that clearly highlight patterns and trends.
- ☐ **Enhance user engagement and trust** by addressing frequent challenges such as difficulty in comparing countries, identifying category-wise distribution (Cultural, Natural, Mixed), and understanding global heritage spread.
- ☐ **Analyze the existing heritage data landscape** to identify gaps in static information platforms and improve accessibility through structured, interactive, and data-driven exploration tools.
