I am

A student researching world heritage sites

A traveler exploring historical places

A data analyst studying global datasets

A history enthusiast

An educator teaching geography or culture

I'm trying to

Explore UNESCO heritage sites worldwide

Understand regional distribution of sites

Analyze endangered heritage locations

Compare countries based on heritage count

Visualize heritage data interactively

But

Data is scattered across different sources

Information is hard to interpret quickly

Most websites lack interactive dashboards

Raw datasets are difficult to understand

Searching manually takes too much time

Because

Existing platforms show mostly text reports

Visualization tools are complex to use

Data isn't centralized in one place

Not everyone understands raw data formats

Reports are not designed for easy insights

Which makes me feel

Frustrated

Confused

Overwhelmed

Less productive

Curious but unable to explore easily
